

STAFF AUGMENTATION SERVICES

FusionStorm's staff augmentation services can help keep your projects on time and within budget and your operations running smoothly. Our dedicated staff augmentation team can connect you with the best IT talent available, drawn from our network of qualified candidates around the world. We can help you find skilled IT professionals to meet a wide range of needs, including:

- Short-Term Assignments
- Resource Gaps
- Large-Scale Iterative Deployments
- Complex Projects

Our processes are designed to enable you to fill requirements quickly and remove much of the risk associated with finding high-level consultants for critical projects. We will help you find candidates who not only meet your technical qualifications but who complement your team and your goals, enabling you to achieve rapid, measurable results.

Unlimited Possibilities

Staff augmentation delivers the technical expertise you need to achieve your business goals without the time and cost associated with internal training and skill development. The FusionStorm staff augmentation group is able to leverage a vast pool of technical resources to provide virtually any IT skill imaginable anywhere in the world. Our staff augmentation services provide access to needed skill sets in a model that can scale up or down quickly, enabling you to manage fluctuating needs and aggressive project timelines.

FusionStorm's staff augmentation specialists have the expertise to help IT managers define the high-level skill requirements for critical projects. FusionStorm engineers thoroughly vet all candidates, whether they come through our partners or recruiters or from our own bench. As a result, our staff augmentation services save time, money and headaches while providing the expertise needed to close skills gaps and tackle complex projects.

FusionStorm provides high-level consultants across a wide range of IT disciplines for critical projects anywhere in the world.

We Speak IT

Many IT staffing firms lack expertise in technical disciplines. FusionStorm has a proven track record of success in the design, architecture, implementation and support of a wide range of technology solutions. We understand technology systems and are adept at finding resources that match each customer's project requirements, operating model and culture, as well as other important, intangible aspects.

In addition, FusionStorm's staff augmentation services help customers reduce financial, technical and organizational risks by leveraging the vast expertise of FusionStorm's Professional Services Group. Our consultants and engineers play a key role in identifying and vetting candidates.

Filling Complex Requirements

The hiring processes within many organizations do not adequately support highly complex IT projects. Human resources specialists are adept at filling core IT positions that have job descriptions and well-defined requirements. Staffing requirements for high-level projects are often more complex and fluid, and may require expertise well outside traditional recruitment channels.

FusionStorm's staff augmentation team can help organizations rapidly locate and mobilize subject-matter experts (SMEs) for high-level, client-managed projects and other in-house requirements. FusionStorm has more than 250 engineers on the bench and more than 100 partners around the world who regularly provide top talent capable of solving critical problems and filling specialized skills requirements in a wide range of disciplines.

Given today's complex IT environments, it is virtually impossible for any organization to maintain all the skill sets needed for every requirement. FusionStorm has many years of experience rapidly bringing the right resources to bear for complex projects, large-scale deployment, short-term assignments and other contract staffing needs. FusionStorm's Professional Services Group can tap a global network of literally thousands of high-end engineers, consultants and developers to quickly provide qualified candidates to fill resource gaps.
